<div> <div> <div></div> <div>Section 508</div> </div> </div>	47
<div> <div> <div></div> <div>Section 508 guidelines for web applications as described at the US Access Board web site.</div> </div> <div> <div></div> <div>1194.22(d)</div> </div> <div> <div></div> <div>Documents shall be organized so they are readable without requiring an associated style sheet.</div> </div> <div> <div></div> <div> <div> <div></div> <div>d.2 Ensure Color and background color may be specified at any level in the casc...</div> </div> <div> <div></div> <div>Users with vision loss or cognitive challenges often require specific foreground (text) and background color combinations. For instance, many people with low vision find it much easier to see a Web page that has white text on a black background, so they may have set their user agent to create this contrast. If the author specifies that the text must be black, then it may override the settings of the user agent and render a page that has black text (specified by the author) on black background (that was set in the user agent). This principle also works in reverse. If the Webmaster forces the background to be white, then the white background specified by the author would be the same color as the white text (which was set in the user agent) rendering the page unusable to the user. Therefore, if the author specifies a foreground (text) color then they should also specify a background color which has sufficient contrast (link) with the foreground and vice versa.</div> </div> <div> <div></div> <div> <div> <div></div> <div>Content specifies foreground (text) color but does not specify background color</div> </div> <div> <div></div> <div> https://juansil24.github.io/web/ <ul style="list-style-type: none"> Line 45, column 13, h1 element Line 45, column 39, br element Line 76, column 11, div element Line 77, column 13, p element Line 78, column 56, br element </div> </div> <div> <div></div> <div>Element specifies background color but not specify foreground (text) color</div> </div> <div> <div></div> <div> <div>d.1 Organize documents so they may be read without style sheets.</div> <div>d.3 Making the DOM order match the visual order.</div> </div> </div> <div> <div></div> <div>1194.22(n)</div> </div> <div> <div></div> <div>1194.22(l)</div> </div> <div> <div></div> <div>1194.22(c)</div> </div> <div> <div></div> <div>1194.22(j)</div> </div> <div> <div></div> <div>1194.22(k)</div> </div> <div> <div></div> <div>1194.22(o)</div> </div> <div> <div></div> <div>1194.22(p)</div> </div> <div> <div></div> <div>1194.22(a)</div> </div> <div> <div></div> <div>1194.22(e)</div> </div> <div> <div></div> <div>1194.22(f)</div> </div> <div> <div></div> <div>1194.22(b)</div> </div> <div> <div></div> <div>1194.22(g)</div> </div> <div> <div></div> <div>1194.22(h)</div> </div> <div> <div></div> <div>1194.22(i)</div> </div> <div> <div></div> <div>1194.22(m)</div> </div> </div> </div></div></div></div>

- **Explica los errores encontrados, su posible solución y adjunta capturas de pantalla, si fuese necesario.**

Algunos de los errores que me muestra son los siguientes:

- Los documentos deben estar organizados de manera que sean legibles sin requerir una hoja de estilo asociada.
- Adapta la web para usuarios discapacitados.
